\* This model of bike has a factory amplifier that must be removed. The XM 160-2 will fit in the bike, but additional wiring changes will be needed, and this should not be considered "plug and play." If using the factory radio, it will also require the radio to be re-flashed to operate properly.

\*\* This model of bike has factory-installed power locks for the saddle bag lids. These will not function with the cut-in kit and will need to be removed prior to the installation of the CA-CUT14.

\*\*\* Street Glides and Road Glides with liquid-cooled heads are CVO models and require additional third-party wiring and adapters to work properly. Please contact your authorized KENWOOD eXcelon Motorsports dealer for further details.
